EDUCATION

The University of Texas at San Antonio, Honors College

Graduated: Spring, 2025

Bachelor of Science, Computer Science – Dual Concentrations in Data Science and Software Engineering

GPA: 3.79

Cornell University, New York City

Expected Graduation: Spring, 2026

Master of Computer Science - Concentration on AI & Entrepreneurship

GPA: 4.0

TECHNICAL SKILLS

- Programming: C, Java, Python, SQL (MySQL & Postgres), PHP, JavaScript, HTML, CSS
- Tools / Technologies: AWS, Docker, Databricks, Kafka, Express/Node.js, jQuery, React, Scikit-learn, OpenCV, Git

EXPERIENCE

Software Engineering/Product Management Intern

Hewlett Packard (HP)

May 2025 – Aug 2025

- Led the design and development of a telemetry system to categorize events and their attributes into structured risk levels, improving data governance and security analysis.
- Partnered with cross-functional security, privacy, and data teams to author and validate a proprietary, industry-endorsed risk framework for telemetry data.
- Fine-tuned a custom LLM on Databricks with security datasets and telemetry attributes to automate risk tagging, saving ~200 hours/month (60%) and accelerating insights.
- Initiated customer onboarding workflows to enable telemetry collection from 100 million+ devices, laying the foundation for a projected 20% uptick in data-driven service adoption and associated revenue growth.

AI/ML Lab Researcher

US Department of Energy MEDAL Program

Sep 2024 – May 2025

- Developed Python scripts for real-time sensor data processing and robotic control using TensorFlow on Jetson NANO and Raspberry Pi 5, enabling autonomous systems in a lab testbed.
- Integrated AI/ML, including OpenAI models, for advanced autonomous capabilities with potential healthcare applications. Deployed pre-trained models and used Docker for seamless integration and scaling of robotic functions.
- Published at ICRA 2025 and presented findings at AI symposia alongside researchers from leading institutions.

Integration Software Developer Intern

Innovative Technologies

May 2024 – Dec 2024

- Designed and implemented Kafka connectors using Java classes to integrate databases with backend APIs for an enterprise application.
- Configured source and sink connectors from scratch for a wide range of platforms including Microsoft Azure, JDBC for MSSQL, Github, and AWS.
- Utilized Docker for application deployment, became proficient in managing connectors via Confluent Hub and Kafka Connect.

RELEVANT PROJECTS

AI Skin Health Monitor App

June 2025 – Present

- Built a cross-platform mobile app using React Native, TypeScript, Expo SDK 54, and Firebase (Auth, Firestore, Storage) to classify 12+ acne types via GPT-5-mini vision API with confidence scoring.
- Developed a FastAPI/Uvicorn backend handling image processing and AI integration; secured endpoints with Firebase token authentication and Firestore security rules for per-user data isolation.
- Integrated an OCR-based Product Ingredient Audit feature to flag comedogenic compounds, driving a unique competitive advantage for an upcoming App Store release.

Audio Conversion Pipeline

Aug 2025 – Nov 2025

- Built a serverless GCP pipeline (Cloud Run + Cloud Storage) with FastAPI backend and Next.js frontend to convert PDFs/EPUBs to MP3 audiobooks.
- Extracted text via pdfminer.six and ebooklib; implemented Vision API OCR fallback with Jenks natural breaks clustering to isolate body text from headers/footers.
- Synthesized audio using Google Cloud Text-to-Speech Long Audio API (WaveNet voices), converted to MP3 via FFmpeg, and served through v4 signed URLs.
